

## CENTER OF CARE SINT-TRUIDEN - 10.060

### Program

Complete structural design

### Concept

Complete structural design for the construction of a new home and nursery for elderly on the outskirts of the city of Sint-Truiden. The new building includes 150 residential units and a nursery for 14 children.

### Specific features

The project is divided into five blocks of about 1000m<sup>2</sup> per floor, two of which have basements. For the construction of these underground levels, special measures were required due to the particular structure of the soil and groundwater level in Sint-Truiden. The central block, housing the reception and a nursery, is characterized by its cantilevered façade. The facades are completely covered with prefabricated panels of architectonic concrete.

Study:	2010-2012	Area:	13500 m <sup>2</sup>
Execution:	2012 - 2015	Total budget:	15.500.000 € Vat Excl.
Architect:	Van Belle Medina Architects	State:	Completed
